INDEX TO AUTHORS

A

Adams, William S. See *Dubbs, Davis, and Adams*, 497

Albert, A. See *Mattox, Mason, and Albert*, 359

Alexander, George V., Nusbaum, Ralph E., and **MacDonald, Norman S.** The relative retention of strontium and calcium in bone tissue, 911

Andrews, J. S., Jr. See *Tove, Andrews, and Lucas*, 275

Armstrong, Marvin D., Shaw, Kenneth N. F., and **Wall, Patricia E.** The phenolic acids of human urine. Paper chromatography of phenolic acids, 293

—, **Wall, Patricia E.,** and **Parker, Virgil J.** The excretion of *m*-hydroxyhippuric acid by humans, 921

Ashmore, James, Hastings, A. Baird, Nesbett, Frances B., and **Renold, Albert E.** Studies on carbohydrate metabolism in rat liver slices. VI. Hormonal factors influencing glucose-6-phosphatase, 77

Atkinson, Daniel E. The biochemistry of *Hydrogenomonas*. IV. The inhibition of hydrogenase by oxygen, 557

Awapara, Jorge. The taurine concentration of organs from fed and fasted rats, 571

Axelrod, Leonard R. See *Ganis, Axelrod, and Miller*, 841

Ayengar, Padmasini, Gibson, David M., Peng, C. H. Lee, and **Sanadi, D. R.** Isolation of guanosine di- and triphosphates from yeast, 521

—. See *Sanadi, Gibson, Ayengar, and Jacob*, 505

B

Bachhawat, Bimal K. See *Robinson, Bachhawat, and Coon*, 391

Balls, A. K. See *Tookey and Balls*, 213

Barker, H. A. See *Rabinowitz and Barker*, 147, 161

Bartlett, Paul D., Grimmett, Pamela, Beers, Lois, and **Shelata, Shirley.** Tissue coenzyme A in normal and induced states of growth, 419

Bean, R. C., and **Hassid, W. Z.** Carbohydrate oxidase from a red alga, *Iridophycus flaccidum*, 425

Beers, Lois. See *Bartlett, Grimmett, Beers, and Shelata*, 419

Beinert, Helmut. See *Crane and Beinert*, 717

—. See *Crane, Mii, Hauge, Green, and Beinert*, 701

Benson, A. A. See *Milhaud, Benson, and Calvin*, 599

Bentley, Orville G. See *Johnson, Bentley, and Mozon*, 379

Benton, D. A., Harper, A. E., and **Elvehjem, C. A.** The effect of different dietary fats on liver fat deposition, 693

Bernhard, Sidney A. Ionization constants and heats of tris(hydroxymethyl)aminomethane and phosphate buffers, 961

Berry, James F., and **Stotz, Elmer.** Rôle of phosphorylcholine in acetylcholine synthesis, 871

Bloch, Konrad. See *Clayton and Bloch*, 305, 319

Blum, Robert. See *Miller and Blum*, 131

Bonner, David M. See *Vogel and Bonner*, 97

Bradley, Louise B. See *Kielley and Bradley*, 653

Brice, Esther Goossen, and **Okey, Ruth.** The effect of fat intake on incorporation of acetate-2-C^{14} into liver lipide and expired carbon dioxide, 107

Brummond, Dewey O. See *Jakoby, Brummond, and Ochoa*, 811

Burns, J. J., Dayton, Peter G., and **Schulenberg, Shirley.** Further observations on the metabolism of L-ascorbic acid in guinea pigs, 15

C

Calvin, Melvin. See *Milhaud, Benson, and Calvin,* 599
del Campillo, Alice. See *Stern and del Campillo,* 985
—. See *Stern, del Campillo, and Raw,* 971
Cardinal, Ruth. See *Lowry, Cardinal, Collins, and Watson,* 641
Cheldelin, Vernon H. See *Newburgh and Cheldelin,* 89
Childress, Scott J. See *Scudi and Childress,* 587
Chung, C. W., and **Najjar, Victor A.** Cofactor requirements for enzymatic denitrification. I. Nitrite reductase, 617
— and —. II. Nitric oxide reductase, 627
Chung, David. See *Li and Chung,* 33
Cifonelli, Joseph A. See *Schiller, Mathews, Cifonelli, and Dorfman,* 139
Clayton, R. B., and **Bloch, Konrad.** Biological synthesis of lanosterol and agnosterol, 305
— and —. The biological conversion of lanosterol to cholesterol, 319
Cline, Richard E. See *Fink, McGaughey, Cline, and Fink,* 1
Collins, Sonia. See *Lowry, Cardinal, Collins, and Watson,* 641
Condliffe, Peter G. See *Li, Papkoff, Fønss-Bech, and Condliffe,* 41
Cooley, Shirley Lucille. See *Wood and Cooley,* 449
Coon, Minor J. See *Robinson, Bachhawat, and Coon,* 391
Cori, Carl F. See *Illingworth, Cori, and Cori,* 123
Cori, Gerty T. See *Illingworth, Cori, and Cori,* 123
Crane, F. L., and **Beinert, Helmut.** On the mechanism of dehydrogenation of fatty acyl derivatives of coenzyme A. II. The electron-transferring flavoprotein, 717
—, **Mii, S., Hauge, Jens G., Green, D. E.,** and **Beinert, Helmut.** On the mechanism of dehydrogenation of fatty acyl derivatives of coenzyme A. I. The general fatty acyl coenzyme A dehydrogenase, 701

D

Damast, B. L. See *West, Damast, Sarro, and Pearson,* 409
Dandliker, Walter B. See *Fox and Dandliker,* 53
Davis, Frances W. See *Dubbs, Davis, and Adams,* 497
Dayton, Peter G. See *Burns, Dayton, and Schulenberg,* 15
Decker, Arthur B. See *Mead, Slaton, and Decker,* 401
Demain, Arnold L. See *Phaff and Demain,* 875
Dorfman, Albert. See *Schiller, Mathews, Cifonelli, and Dorfman,* 139
Doudoroff, Michael. See *Palleroni and Doudoroff,* 535
Dubbs, Clyde A., Davis, Frances W., and **Adams, William S.** Simple microdetermination of uric acid, 497

E

Eagle, Harry, Oyama, Vance I., Levy, Mina, Horton, Clara L., and **Fleischman, Ralph.** The growth response of mammalian cells in tissue culture to L-glutamine and L-glutamic acid, 607
Eich, Stephen. See *Melville and Eich,* 647
Elder, Harvey A., and **Mortensen, R. A.** The incorporation of labeled glycine into erythrocyte glutathione, 261
—. See *Mortensen, Haley, and Elder,* 269
Elliott, W. B. See *Marcus and Elliott,* 823
Ellis, Stanley, Noda, Grant, and **Simpson, Miriam E.** Observations on the stability of growth hormone, 115
Elvehjem, C. A. See *Benton, Harper, and Elvehjem,* 693
Evans, John D., Waldron, Jerome M., Oleksyshyn, Nadia L., and **Riemenschneider, Roy W.** Polyunsaturated fatty acids in normal human blood, 255

Eydt, Kathryn M. See *Robins, Roberts, Eydt, Lowry, and Smith,* 897

F

Fink, Kay. Excretion of pyrimidine reduction products by the rat, 9
—. See *Fink, McGaughey, Cline, and Fink,* 1
Fink, R. M., McGaughey, Charles, Cline, Richard E., and **Fink, Kay.** Metabolism of intermediate pyrimidine reduction products *in vitro,* 1
Fishman, William H., and **Sie, Hsiengieh.** Formation of testosterone glucuronide by surviving liver slices, 335
Fleischman, Ralph. See *Eagle, Oyama, Levy, Horton, and Fleischman,* 607
Fønss-Bech, Peter. See *Li, Papkoff, Fønss-Bech, and Condliffe,* 41
Fox, Jay B., Jr., and **Dandliker, Walter B.** A study of some of the physical properties of glyceraldehyde-3-phosphate dehydrogenase, 53
Fruton, Joseph S. See *Izumiya and Fruton,* 59

G

Ganis, Frank M., Axelrod, Leonard R., and **Miller, Leon L.** The metabolism of hydrocortisone by kidney tissue *in vitro,* 841
Garcia Hernandez, Mario. See *Kun and Garcia Hernandez,* 201
Gibson, David M. See *Ayengar, Gibson, Peng, and Sanadi,* 521
—. See *Sanadi, Gibson, Ayengar, and Jacob,* 505
Glick, David. See *Jardetzky and Glick,* 283
Green, D. E. See *Crane, Mii, Hauge, Green, and Beinert,* 701
Grimmett, Pamela. See *Bartlett, Grimmett, Beers, and Shelata,* 419

H

Haley, M. I. See *Mortensen, Haley, and Elder,* 269
Handa, Dorothy T. See *Swick and Handa,* 577
Harper, A. E. See *Benton, Harper, and Elvehjem,* 693
Hassid, W. Z. See *Bean and Hassid,* 425
Hastings, A. Baird. See *Ashmore, Hastings, Nesbett, and Renold,* 77
Hauge, Jens G. See *Crane, Mii, Hauge, Green, and Beinert,* 701
Heym, Gloria A. See *Juni and Heym,* 365
Hoagland, Mahlon B., Keller, Elizabeth B., and **Zamecnik, Paul C.** Enzymatic carboxyl activation of amino acids, 345
Horecker, B. L., Hurwitz, Jerard, and **Weissbach, Arthur.** The enzymatic synthesis and properties of ribulose 1,5-diphosphate, 785
—. See *Hurwitz, Weissbach, Horecker, and Smyrniotis,* 769
—. See *Marks and Horecker,* 327
—. See *Smyrniotis and Horecker,* 745
—. See *Stumpf and Horecker,* 753
—. See *Weissbach, Horecker, and Hurwitz,* 795
Horton, Clara L. See *Eagle, Oyama, Levy, Horton, and Fleischman,* 607
Huffman, Max N., Lott, Mary Harriet, and **Tillotson, Albert.** 16-Substituted steroids. XVI. 5-Androsten-3β-ol-16-one, 565
Hurwitz, Jerard, Weissbach, Arthur, Horecker, B. L., and **Smyrniotis, P. Z.** Spinach phosphoribulokinase, 769
—. See *Horecker, Hurwitz, and Weissbach,* 785
—. See *Weissbach, Horecker, and Hurwitz,* 795

I

Illingworth, Barbara, Cori, Gerty T., and **Cori, Carl F.** Amylo-1,6-glucosidase in muscle tissue in generalized glycogen storage disease, 123
Izumiya, Nobuo, and **Fruton, Joseph S.** Specificity of cathepsin C, 59

J

Jacob, Miriam. See *Sanadi, Gibson, Ayengar, and Jacob,* 505

Jakoby, William B., Brummond, Dewey O., and **Ochoa, Severo.** Formation of 3-phosphoglyceric acid by carbon dioxide fixation with spinach leaf enzymes, 811

Jardetzky, Christine D., and **Glick, David.** Studies in histochemistry. XXXVIII. Determination of succinic dehydrogenase in microgram amounts of tissue and its distribution in rat adrenal, 283

Johnson, Ronald R., Bentley, Orville G., and **Moxon, A. L.** Synthesis *in vitro* and *in vivo* of Co^{60} containing vitamin B_{12}-active substances by rumen microorganisms, 379

Juni, Elliot, and **Heym, Gloria A.** Acyloin condensation reactions of pyruvic oxidase, 365

K

Kaplan, Nathan O. See *Wolff and Kaplan*, 849

Keller, Elizabeth B. See *Hoagland, Keller, and Zamecnik*, 345

Kielley, W. Wayne, and **Bradley, Louise B.** The relationship between sulfhydryl groups and the activation of myosin adenosinetriphosphatase, 653

Kornberg, S. R. Tripolyphosphate and trimetaphosphate in yeast extracts, 23

Kun, Ernest, and **Garcia Hernandez, Mario.** The oxidation of tartaric acid by an enzyme system of mitochondria, 201

L

Laforet, Mitsuko Tashiro, and **Thomas, E. Donnall.** The effect of cobalt on heme synthesis by bone marrow *in vitro*, 595

Levy, Mina. See *Eagle, Oyama, Levy, Horton, and Fleischman*, 607

Li, Choh Hao, and **Chung, David.** Amino acid composition of hypophyseal growth hormone as determined by paper chromatography of the dinitrophenyl amino acids, 33

Li, Choh Hao, Papkoff, Harold, Fønss-Bech, Peter, and **Condliffe, Peter G.** Action of chymotrypsin on hypophyseal growth hormone, 41

Lott, Mary Harriet. See *Huffman, Lott, and Tillotson*, 565

Lowry, Oliver H. See *Robins, Roberts, Eydt, Lowry, and Smith*, 897

Lowry, P. T., Cardinal, Ruth, Collins, Sonia, and **Watson, C. J.** The isolation of crystalline *d*-urobilinogen, 641

—. See *Watson and Lowry*, 633

Lucas, H. L. See *Tove, Andrews, and Lucas*, 275

M

MacDonald, Norman S. See *Alexander, Nusbaum, and MacDonald*, 911

Marcus, Abraham, and **Elliott, W. B.** Enzymatic reactions of fluoroacetate and fluoroacetyl coenzyme A, 823

Marcus, Philip I., and **Talalay, Paul.** Induction and purification of α- and β-hydroxysteroid dehydrogenases, 661

—. See *Talalay and Marcus*, 675

Marks, Paul A., and **Horecker, B. L.** Distribution of radioactive carbon dioxide incorporated into rat liver glycogen, 327

Mason, Harold L. See *Mattox, Mason, and Albert*, 359

Mathews, Martin B. See *Schiller, Mathews, Cifonelli, and Dorfman*, 139

Mattox, Vernon R., Mason, Harold L., and **Albert, A.** The preparation on a microgram scale of some derivatives of aldosterone: their use in paper chromatography, 359

Mayer, Jean. See *Shull and Mayer*, 885

McGaughey, Charles. See *Fink, McGaughey, Cline, and Fink*, 1

Mead, James F., Slaton, William H., Jr., and **Decker, Arthur B.** Metabolism of the essential fatty acids. II. The metabolism of stearate, oleate, and linoleate by fat-deficient and normal mice, 401

Mehler, Alan H. Formation of picolinic and quinolinic acids following enzymatic oxidation of 3-hydroxyanthranilic acid, 241

Melville, Donald B., and **Eich, Stephen.** The occurrence of ergothioneine in plant material, 647

Migeon, Claude J. Identification and isolation of androsterone from peripheral human plasma, 941

Mii, S. See *Crane, Mii, Hauge, Green, and Beinert,* 701

Milhaud, Gerard, Benson, A. A., and **Calvin, Melvin.** Metabolism of pyruvic acid-2-C^{14} and hydroxypyruvic acid-2-C^{14} in algae, 599

Miller, Gail Lorenz, and **Blum, Robert.** Resolution of fungal cellulase by zone electrophoresis, 131

Miller, Leon L. See *Ganis, Axelrod, and Miller,* 841

Morales, Manuel F. See *Podolsky and Morales,* 945

Mortensen, R. A., Haley, M. I., and **Elder, Harvey A.** The turnover of erythrocyte glutathione in the rat, 269

—. See *Elder and Mortensen,* 261

Moxon, A. L. See *Johnson, Bentley, and Moxon,* 379

Moyed, H. S., and **O'Kane, D. J.** Enzymes and coenzymes of the pyruvate oxidase of *Proteus,* 831

N

Najjar, Victor A. See *Chung and Najjar,* 617, 627

Nesbett, Frances B. See *Ashmore, Hastings, Nesbett, and Renold,* 77

Newburgh, R. W., and **Cheldelin, Vernon H.** The intracellular distribution of pentose cycle activity in rabbit kidney and liver, 89

Noda, Grant. See *Ellis, Noda, and Simpson,* 115

Nusbaum, Ralph E. See *Alexander, Nusbaum, and MacDonald,* 911

O

Ochoa, Severo. See *Jakoby, Brummond, and Ochoa,* 811

O'Kane, D. J. See *Moyed and O'Kane,* 831

Okey, Ruth. See *Brice and Okey,* 107

Oleksyshyn, Nadia L. See *Evans, Waldron, Oleksyshyn, and Riemenschneider,* 255

Oyama, Vance I. See *Eagle, Oyama, Levy, Horton, and Fleischman,* 607

P

Palleroni, Norberto J., and **Doudoroff, Michael.** Mannose isomerase of *Pseudomonas saccharophila,* 535

Palmer, James K. See *Vickery and Palmer,* 225

Papkoff, Harold. See *Li, Papkoff, Fønss-Bech, and Condliffe,* 41

Parker, Virgil J. See *Armstrong, Wall, and Parker,* 921

Pearson, O. H. See *West, Damast, Sarro, and Pearson,* 409

Peng, C. H. Lee. See *Ayengar, Gibson, Peng, and Sanadi,* 521

Phaff, H. J., and **Demain, Arnold L.** The unienzymatic nature of yeast polygalacturonase, 875

Podolsky, Richard J., and **Morales, Manuel F.** The enthalpy change of adenosine triphosphate hydrolysis, 945

Pricer, W. E., Jr. See *Rabinowitz and Pricer,* 189

Prusoff, William H., and **Welch, Arnold D.** Studies on the mechanism of action of 6-azathymine. II. Azathymine deoxyriboside, a microbial inhibitor, 929

R

Rabinowitz, Jesse C. Purine fermentation by *Clostridium cylindrosporum.* III. 4-Amino-5-imidazolecarboxylic acid and 4-aminoimidazole, 175

— and **Barker, H. A.** Purine fermentation by *Clostridium cylindrosporum.* I. Tracer experiments on the fermentation of guanine, 147

— and —. II. Purine transformations, 161

— and **Pricer, W. E., Jr.** Purine fermentation by *Clostridium cylindro-*

sporum. IV. 4-Ureido-5-imidazolecarboxylic acid, 189

Rall, T. W., Sutherland, Earl W., and **Wosilait, Walter D.** The relationship of epinephrine and glucagon to liver phosphorylase. III. Reactivation of liver phosphorylase in slices and in extracts, 483

Raw, Isaias. See *Stern, del Campillo, and Raw,* 971

Renold, Albert E. See *Ashmore, Hastings, Nesbett, and Renold,* 77

Riemenschneider, Roy W. See *Evans, Waldron, Oleksyshyn, and Riemenschneider,* 255

Roberts, Nira R. See *Robins, Roberts, Eydt, Lowry, and Smith,* 897

Robins, Eli, Roberts, Nira R., Eydt, Kathryn M., Lowry, Oliver H., and **Smith, David E.** Microdetermination of α-keto acids with special reference to malic, lactic, and glutamic dehydrogenases in brain, 897

Robinson, William G., Bachhawat, Bimal K., and **Coon, Minor J.** Tiglyl coenzyme A and α-methylacetoacetyl coenzyme A, intermediates in the enzymatic degradation of isoleucine, 391

S

Sanadi, D. R., Gibson, David M., Ayengar, Padmasini, and **Jacob, Miriam.** α-Ketoglutaric dehydrogenase. V. Guanosine diphosphate in coupled phosphorylation, 505

—. See *Ayengar, Gibson, Peng, and Sanadi,* 521

Sarro, S. D. See *West, Damast, Sarro, and Pearson,* 409

Schiller, Sara, Mathews, Martin B., Cifonelli, Joseph A., and **Dorfman, Albert.** The metabolism of mucopolysaccharides in animals. III. Further studies on skin utilizing C^{14}-glucose, C^{14}-acetate, and S^{35}-sodium sulfate, 139

Schulenberg, Shirley. See *Burns, Dayton, and Schulenberg,* 15

Scudi, John V., and **Childress, Scott J.** Constitution of the hydroxysulfapyridine isolated from dog urine, 587

Shaw, Kenneth N. F. See *Armstrong, Shaw, and Wall,* 293

Shelata, Shirley. See *Bartlett, Grimmett, Beers, and Shelata,* 419

Shull, Kenneth H., and **Mayer, Jean.** The turnover of liver glycogen in obese hyperglycemic mice, 885

Sie, Hsien-gieh. See *Fishman and Sie,* 335

Simpson, Miriam E. See *Ellis, Noda, and Simpson,* 115

Slaton, William H., Jr. See *Mead, Slaton, and Decker,* 401

Smith, David E. See *Robins, Roberts, Eydt, Lowry, and Smith,* 897

Smyrniotis, P. Z., and **Horecker, B. L.** The preparation of sedoheptulose diphosphate, 745

—. See *Hurwitz, Weissbach, Horecker, and Smyrniotis,* 769

Stern, Joseph R., and **del Campillo, Alice.** Enzymes of fatty acid metabolism. II. Properties of crystalline crotonase, 985

—, —, and **Raw, Isaias.** Enzymes of fatty acid metabolism. I. General introduction; crystalline crotonase, 971

Stone, Marcia M. See *Brice and Okey,* 107

Stotz, Elmer. See *Berry and Stotz,* 871

Stumpf, P. K., and **Horecker, B. L.** The rôle of xylulose 5-phosphate in xylose metabolism of *Lactobacillus pentosus,* 753

Sutherland, Earl W., and **Wosilait, Walter D.** The relationship of epinephrine and glucagon to liver phosphorylase. I. Liver phosphorylase; preparation and properties, 459

—. See *Rall, Sutherland, and Wosilait,* 483

—. See *Wosilait and Sutherland,* 469

Swick, Robert W., and **Handa, Dorothy T.** The distribution of fixed carbon in amino acids, 577

T

Talalay, Paul, and **Marcus, Philip I.** Specificity, kinetics, and inhibition of α- and β-hydroxysteroid dehydrogenases, 675

—. See *Marcus and Talalay,* 661

Tanenbaum, Stuart W. A study of the transamination reaction by use of isotopic nitrogen, 733

Thomas, E. Donnall. See *Laforet and Thomas,* 595

Tillotson, Albert. See *Huffman, Lott, and Tillotson,* 565

Tomkins, Gordon M. A mammalian 3α-hydroxysteroid dehydrogenase, 437

Tookey, Harvey L., and **Balls, A. K.** Plant phospholipase D. I. Studies on cottonseed and cabbage phospholipase D, 213

Tove, S. B., Andrews, J. S., Jr., and **Lucas, H. L.** Turnover of palmitic, stearic, and unsaturated fatty acids in rat liver, 275

V

Vickery, Hubert Bradford, and **Palmer, James K.** The metabolism of the organic acids of tobacco leaves. X. Effect of culture of excised leaves in solutions of fumarate and maleate, 225

Vogel, Henry J., and **Bonner, David M.** Acetylornithinase of *Escherichia coli:* partial purification and some properties, 97

W

Waldron, Jerome M. See *Evans, Waldron, Oleksyshyn, and Riemenschneider,* 255

Walker, James B. Biosynthesis of arginine from canavanine and ornithine in kidney, 549

Wall, Patricia E. See *Armstrong, Shaw, and Wall,* 293

—. See *Armstrong, Wall, and Parker,* 921

Watson, C. J., and **Lowry, P. T.** A further study of crystalline *d*-urobilin, 633

—. See *Lowry, Cardinal, Collins, and Watson,* 641

Weissbach, Arthur, Horecker, B. L., and **Hurwitz, Jerard.** The enzymatic formation of phosphoglyceric acid from ribulose diphosphate and carbon dioxide, 795

—. See *Horecker, Hurwitz, and Weissbach,* 785

—. See *Hurwitz, Weissbach, Horecker, and Smyrniotis,* 769

Welch, Arnold D. See *Prusoff and Welch,* 929

West, Charles Donald, Damast, B. L., Sarro, S. D., and **Pearson, O. H.** Conversion of testosterone to estrogens in castrated, adrenalectomized human females, 409

Wolff, John B., and **Kaplan, Nathan O.** D-Mannitol 1-phosphate dehydrogenase from *Escherichia coli,* 849

Wood, John L., and **Cooley, Shirley Lucille.** Detoxication of cyanide by cystine, 449

Wosilait, Walter D., and **Sutherland, Earl W.** The relationship of epinephrine and glucagon to liver phosphorylase. II. Enzymatic inactivation of liver phosphorylase, 469

—. See *Rall, Sutherland, and Wosilait,* 483

—. See *Sutherland and Wosilait,* 459

Z

Zamecnik, Paul C. See *Hoagland, Keller, and Zamecnik,* 345

INDEX TO SUBJECTS

A

Acetate: Carbon 14-labeled, incorporation into liver lipide and expired carbon dioxide, fat intake effect, *Brice and Okey*, 107

—, skin mucopolysaccharide metabolism, relation, *Schiller, Mathews, Cifonelli, and Dorfman*, 139

Fluoro-. *See* Fluoroacetate

Acetylcholine: Synthesis, phosphorylcholine relation, *Berry and Stotz*, 871

Acetylornithinase: *Escherichia coli*, *Vogel and Bonner*, 97

Adenosinetriphosphatase: Myosin, activation, sulfhydryl groups, relation, *Kielley and Bradley*, 653

Adenosine triphosphate: Hydrolysis, enthalpy, *Podolsky and Morales*, 945

Adrenal(s): Succinic dehydrogenase, *Jardetzky and Glick*, 283

Adrenalectomy: Testosterone conversion to estrogens, effect, *West, Damast, Sarro, and Pearson*, 409

Agnosterol: Synthesis, biological, *Clayton and Bloch*, 305

Aldosterone: Derivatives, preparation, microgram scale, *Mattox, Mason, and Albert*, 359

Alga: Hydroxypyruvic acid-2-C^{14} metabolism, *Milhaud, Benson, and Calvin*, 599

Pyruvic acid-2-C^{14} metabolism, *Milhaud, Benson, and Calvin*, 599

Red. *See also Iridophycus*

Amino acid(s): Carbon, fixed, distribution, *Swick and Handa*, 577

Carboxyl activation, enzymatic, *Hoagland, Keller, and Zamecnik*, 345

Hypophyseal growth hormone, *Li and Chung*, 33

Aminoimidazole: 4-, *Clostridium cylindrosporum* purine fermentation, relation, *Rabinowitz*, 175

Amino-5-imidazolecarboxylic acid: 4-, *Clostridium cylindrosporum* purine fermentation, relation, *Rabinowitz*, 175

Amylo-1,6-glucosidase: Muscle, glycogen storage disease, *Illingworth, Cori, and Cori*, 123

Androsten-3β-ol-16-one: 5-, *Huffman, Lott, and Tillotson*, 565

Androsterone: Blood plasma, *Migeon*, 941

Anthranilic acid: Hydroxy-. *See* Hydroxyanthranilic acid

Arginine: Biosynthesis from canavanine and ornithine, kidney, *Walker*, 549

Ascorbic acid: L-, metabolism, *Burns, Dayton, and Schulenberg*, 15

Azathymine: 6-, action, mechanism, *Prusoff and Welch*, 929

Azathymine deoxyriboside: Microbial inhibitor, *Prusoff and Welch*, 929

B

Bacillus: *See also Lactobacillus*

Bacteria: *See also Clostridium, Escherichia, Hydrogenomonas, Pseudomonas*

Blood: Fatty acids, polyunsaturated, *Evans, Waldron, Oleksyshyn, and Riemenschneider*, 255

Blood cell: Red, glutathione, glycine, labeled, incorporation into, *Elder and Mortensen*, 261

—, —, turnover, *Mortensen, Haley, and Elder*, 269

Blood plasma: Androsterone, *Migeon*, 941

Bone: Calcium retention, *Alexander, Nusbaum, and MacDonald*, 911

Strontium retention, *Alexander, Nusbaum, and MacDonald*, 911

Bone marrow: Heme synthesis, cobalt effect, *Laforet and Thomas*, 595

Brain: Glutamic dehydrogenase determination, *Robins, Roberts, Eydt, Lowry, and Smith*, 897

XUM

Brain—*continued:*
Lactic dehydrogenase determination, *Robins, Roberts, Eydt, Lowry, and Smith*, 897
Malic dehydrogenase determination, *Robins, Roberts, Eydt, Lowry, and Smith*, 897

C

Cabbage: Phospholipase D, *Tookey and Balls*, 213
Calcium: Retention, bone, *Alexander, Nusbaum, and MacDonald*, 911
Canavanine: Arginine biosynthesis from, kidney, *Walker*, 549
Carbohydrate: Metabolism, liver, *Ashmore, Hastings, Nesbett, and Renold*, 77
Carbohydrate oxidase: *Iridophycus flaccidum, Bean and Hassid*, 425
Carbon: Fixed, amino acids, distribution, *Swick and Handa*, 577
Carbon dioxide: Acetate-2-C^{14} incorporation into, fat intake, effect, *Brice and Okey*, 107
Fixation, 3-phosphoglyceric acid formation, spinach leaf enzymes and, *Jakoby, Brummond, and Ochoa*, 811
Phosphoglyceric acid formation from, enzymatic, *Weissbach, Horecker, and Hurwitz*, 795
Radioactive, incorporation into liver glycogen, *Marks and Horecker*, 327
Carboxylic acid: 4-Amino-5-imidazole-. *See* Amino-5-imidazolecarboxylic acid
4-Ureido-5-imidazole-. *See* Ureido-5-imidazolecarboxylic acid
Castration: Testosterone conversion to estrogens, effect, *West, Damast, Sarro, and Pearson*, 409
Cathepsin: C, *Izumiya and Fruton*, 59
Cell: Growth, tissue culture, L-glutamine and L-glutamic acid effect, *Eagle, Oyama, Levy, Horton, and Fleischman*, 607
Cellulase: Fungus, resolution, *Miller and Blum*, 131
Cholesterol: Formation from lanosterol, *in vivo, Clayton and Bloch*, 319
Choline: Acetyl-. *See* Acetylcholine
Phosphoryl-. *See* Phosphorylcholine
Chymotrypsin: Hypophyseal growth hormone, action, *Li, Papkoff, Fǿnss-Bech, and Condliffe*, 41
Clostridium cylindrosporum: Guanine fermentation, *Rabinowitz and Barker*, 147
Purine fermentation, *Rabinowitz and Barker*, 147, 161
— —, 4-amino-5-imidazolecarboxylic acid and 4-aminoimidazole, relation, *Rabinowitz*, 175
— —, 4-ureido-5-imidazolecarboxylic acid, relation, *Rabinowitz and Pricer*, 189
— transformations, *Rabinowitz and Barker*, 161
Cobalt: Bone marrow heme synthesis, effect, *Laforet and Thomas*, 595
Mass 60, vitamin B_{12}-active substances, synthesis, rumen microorganisms, *Johnson, Bentley, and Moxon*, 379
Coenzyme: A, acyl derivatives, fatty, dehydrogenation mechanism, *Crane, Mii, Hauge, Green, and Beinert*, 701
Crane and Beinert, 717
—, — —, —, flavoprotein, electron-transferring, relation, *Crane and Beinert*, 717
— dehydrogenase. *See* Coenzyme A dehydrogenase
—, fluoroacetyl. *See* Fluoroacetyl coenzyme A
—, methylacetoacetyl. *See* Methylacetoacetyl coenzyme A
—, tiglyl. *See* Tiglyl coenzyme A
—, tissue, growth, *Bartlett, Grimmett, Beers, and Shelata*, 419
Proteus pyruvate oxidase, *Moyed and O'Kane*, 831
Coenzyme A dehydrogenase: Acyl, fatty, *Crane, Mii, Hauge, Green, and Beinert*, 701
Cortisone: Hydro-. *See* Hydrocortisone
Cottonseed: Phospholipase D, *Tookey and Balls*, 213
Crotonase: *Stern, del Campillo, and Raw*, 971
Stern and del Campillo, 985

Cyanide: Detoxication, cystine effect, *Wood and Cooley*, 449
Cystine: Cyanide detoxication, effect, *Wood and Cooley*, 449

D

Dehydrogenase: Glutamic. *See* Glutamic dehydrogenase
Glyceraldehyde-3-phosphate. *See* Glyceraldehyde-3-phosphate dehydrogenase
Hydroxysteroid. *See* Hydroxysteroid dehydrogenase
α-Ketoglutaric. *See* Ketoglutaric dehydrogenase
Lactic. *See* Lactic dehydrogenase
Malic. *See* Malic dehydrogenase
Mannitol 1-phosphate. *See* Mannitol 1-phosphate dehydrogenase
Succinic. *See* Succinic dehydrogenase
Denitrification: Enzyme, cofactor requirements, *Chung and Najjar*, 617, 627

E

Enzyme(s): Amino acid carboxyl activation, *Hoagland, Keller, and Zamecnik*, 345
Co-. *See* Coenzyme
Denitrification, cofactor requirements, *Chung and Najjar*, 617, 627
Fatty acid metabolism, *Stern, del Campillo, and Raw*, 971
Stern and del Campillo, 985
3-Hydroxyanthranilic acid oxidation, picolinic acid formation, relation, *Mehler*, 241
— — —, quinolinic acid formation, relation, *Mehler*, 241
Isoleucine degradation, tiglyl coenzyme A and α-methylacetoacetyl coenzyme A, relation, *Robinson, Bachhawat, and Coon*, 391
Liver phosphorylase, effect, *Wosilait and Sutherland*, 469
Phosphoglyceric acid formation, from ribulose diphosphate and carbon dioxide, *Weissbach, Horecker, and Hurwitz*, 795
Proteus pyruvate oxidase, *Moyed and O'Kane*, 831
Enzyme(s)—*continued:*
Reactions, fluoroacetate, *Marcus and Elliott*, 823
—, fluoroacetyl coenzyme A, *Marcus and Elliott*, 823
Ribulose 1,5-diphosphate synthesis, *Horecker, Hurwitz, and Weissbach*, 785
Spinach leaf, 3-phosphoglyceric acid formation, carbon dioxide fixation and, *Jakoby, Brummond, and Ochoa*, 811
System, mitochondria, tartaric acid oxidation, *Kun and Garcia Hernandez*, 201
See also Acetylornithinase, Cellulase, etc.
Epinephrine: Liver phosphorylase, relation, *Sutherland and Wosilait*, 459
Wosilait and Sutherland, 469
Rall, Sutherland, and Wosilait, 483
Ergothioneine: Plant, *Melville and Eich*, 647
Erythrocyte(s): *See* Blood cell, red
Escherichia coli: Acetylornithinase, *Vogel and Bonner*, 97
D-Mannitol 1-phosphate dehydrogenase, *Wolff and Kaplan*, 849
Estrogen(s): Testosterone conversion to, castration and adrenalectomy effect, *West, Damast, Sarro, and Pearson*, 409

F

Fasting: Organ taurine, effect, *Awapara*, 571
Fat: Acetate-2-C^{14} incorporation into liver lipide and expired carbon dioxide, effect, *Brice and Okey*, 107
Deficiency, linoleate metabolism, effect, *Mead, Slaton, and Decker*, 401
—, oleate metabolism, effect, *Mead, Slaton, and Decker*, 401
—, stearate metabolism, effect, *Mead, Slaton, and Decker*, 401
Deposition, liver, dietary fat effect, *Benton, Harper, and Elvehjem*, 693
Dietary, liver fat deposition, effect, *Benton, Harper, and Elvehjem*, 693

XUM

Fatty acid(s): Essential, metabolism, *Mead, Slaton, and Decker,* 401
Metabolism, enzymes, *Stern, del Campillo, and Raw,* 971
Stern and del Campillo, 985
Polyunsaturated, blood, *Evans, Waldron, Oleksyshyn, and Riemenschneider,* 255
Unsaturated, turnover, liver, *Tove, Andrews, and Lucas,* 275
Flavoprotein: Electron-transferring, coenzyme A, acyl derivatives, fatty, dehydrogenation mechanism, relation, *Crane and Beinert,* 717
Fluoroacetate: Enzyme reactions, *Marcus and Elliott,* 823
Fluoroacetyl coenzyme A: *Marcus and Elliott,* 823
Fumarate: Tobacco leaf culture, effect, *Vickery and Palmer,* 225
Fungus: Cellulase, resolution, *Miller and Blum,* 131

G

Galacturonase: Poly-. *See* Polygalacturonase
Glucagon: Liver phosphorylase, relation, *Sutherland and Wosilait,* 459
Wosilait and Sutherland, 469
Rall, Sutherland, and Wosilait, 483
Glucose: Carbon 14-labeled, skin mucopolysaccharide metabolism, relation, *Schiller, Mathews, Cifonelli, and Dorfman,* 139
Glucose-6-phosphatase: Liver, hormones, effect, *Ashmore, Hastings, Nesbett, and Renold,* 77
Glucosidase: Amylo-1,6-. *See* Amylo-1,6-glucosidase
Glucuronide: Testosterone. *See* Testosterone glucuronide
Glutamic acid: L-, cell growth, tissue culture, effect, *Eagle, Oyama, Levy, Horton, and Fleischman,* 607
Glutamic dehydrogenase: Brain, determination, micro-, *Robins, Roberts, Eydt, Lowry, and Smith,* 897
Glutamine: L-, cell growth, tissue culture, effect, *Eagle, Oyama, Levy, Horton, and Fleischman,* 607
Glutathione: Erythrocyte, glycine, labeled, incorporation into, *Elder and Mortensen,* 261
Turnover, erythrocyte, *Mortensen, Haley, and Elder,* 269
Glyceraldehyde-3-phosphate dehydrogenase: *Fox and Dandliker,* 53
Glyceric acid: Phospho-. *See* Phosphoglyceric acid
Glycine: Labeled, incorporation into erythrocyte glutathione, *Elder and Mortensen,* 261
Glycogen: Liver, carbon dioxide, radioactive, incorporation into, *Marks and Horecker,* 327
Storage disease, muscle amylo-1,6-glucosidase, *Illingworth, Cori, and Cori,* 123
Turnover, liver, obese hyperglycemia, *Shull and Mayer,* 885
Growth: Cell, tissue culture, L-glutamine and L-glutamic acid effect, *Eagle, Oyama, Levy, Horton, and Fleischman,* 607
Hormone, hypophyseal, chymotrypsin action, *Li, Papkoff, Fønss-Bech, and Condliffe,* 41
—, hypophysis, amino acids, *Li and Chung,* 33
—, stability, *Ellis, Noda, and Simpson,* 115
See Hormone, Tissue, Cell
Tissue coenzyme A, *Bartlett, Grimmett, Beers, and Shelata,* 419
Guanine: Fermentation, *Clostridium cylindrosporum, Rabinowitz and Barker,* 147
Guanosine diphosphate: Phosphoryl, coupled, relation, *Sanadi, Gibson, Ayengar, and Jacob,* 505
Yeast, isolation, *Ayengar, Gibson, Peng, and Sanadi,* 521
Guanosine triphosphate: Yeast, isolation, *Ayengar, Gibson, Peng, and Sanadi,* 521

H

Heme: Synthesis, bone marrow, cobalt effect, *Laforet and Thomas,* 595
Hippuric acid: Hydroxy-. *See* Hydroxyhippuric acid

Histochemistry: *Jardetzky and Glick,* 283
Hormone(s): Liver glucose-6-phosphatase, effect, *Ashmore, Hastings, Nesbett, and Renold,* 77
Hydrocortisone: Metabolism, kidney, *Ganis, Axelrod, and Miller,* 841
Hydrogenase: *Hydrogenomonas,* oxygen effect, *Atkinson,* 557
Hydrogenomonas: Biochemistry, *Atkinson,* 557
Hydrogenase, oxygen effect, *Atkinson,* 557
Hydroxyanthranilic acid: 3-, oxidation, enzymatic, picolinic acid formation, relation, *Mehler,* 241
—, —, —, quinolinic acid formation, relation, *Mehler,* 241
Hydroxyhippuric acid: *m*-, excretion, *Armstrong, Wall, and Parker,* 921
Hydroxypyruvic acid: Carbon 14-labeled, metabolism, algae, *Milhaud, Benson, and Calvin,* 599
Hydroxysteroid dehydrogenase: 3α-, mammalian, *Tomkins,* 437
α- and β-, *Marcus and Talalay,* 661
Talalay and Marcus, 675
Hydroxysulfapyridine: Urine, *Scudi and Childress,* 587
Hyperglycemia: Obesity, liver glycogen turnover, *Shull and Mayer,* 885
Hypophysis: *See* Pituitary

I

Imidazole: Amino-. *See* Aminoimidazole
Iridophycus flaccidum: Carbohydrate oxidase, *Bean and Hassid,* 425
Isoleucine: Degradation, enzymatic, tiglyl coenzyme A and α-methylacetoacetyl coenzyme A, relation, *Robinson, Bachhawat, and Coon,* 391
Isomerase: Mannose. *See* Mannose isomerase

K

Keto acids: α-, determination, micro-, *Robins, Roberts, Eydt, Lowry, and Smith,* 897
Ketoglutaric dehydrogenase: α-, *Sanadi, Gibson, Ayengar, and Jacob,* 505
Kidney: Arginine biosynthesis from canavanine and ornithine, *Walker,* 549
Hydrocortisone metabolism, *Ganis, Axelrod, and Miller,* 841
Pentose cycle activity, intracellular distribution, *Newburgh and Cheldelin,* 89
Kinase: Phosphoribulo-. *See* Phosphoribulokinase

L

Lactic dehydrogenase: Brain, determination, micro-, *Robins, Roberts, Eydt, Lowry, and Smith,* 897
Lactobacillus pentosus: Xylose metabolism, xylulose 5-phosphate rôle, *Stumpf and Horecker,* 753
Lanosterol: Cholesterol formation from, *in vivo, Clayton and Bloch,* 319
Synthesis, biological, *Clayton and Bloch,* 305
Leucine: Iso-. *See* Isoleucine
Linoleate: Metabolism, fat deficiency effect, *Mead, Slaton, and Decker,* 401
Lipase: Phospho-. *See* Phospholipase
Lipide: Liver, acetate-2-C^{14} incorporation into, fat intake, effect, *Brice and Okey,* 107
Liver: Carbohydrate metabolism, *Ashmore, Hastings, Nesbett, and Renold,* 77
Fat deposition, dietary fat effect, *Benton, Harper, and Elvehjem,* 693
Fatty acids, unsaturated, turnover, *Tove, Andrews, and Lucas,* 275
Glucose-6-phosphatase, hormones, effect, *Ashmore, Hastings, Nesbett, and Renold,* 77
Glycogen, carbon dioxide, radioactive, incorporation into, *Marks and Horecker,* 327
— turnover, obese hyperglycemia, *Shull and Mayer,* 885
Lipide, acetate-2-C^{14} incorporation into, fat intake, effect, *Brice and Okey,* 107

Liver—*continued:*
Palmitic acid turnover, *Tove, Andrews, and Lucas,* 275
Pentose cycle activity, intracellular distribution, *Newburgh and Cheldelin,* 89
Phosphorylase, *Rall, Sutherland, and Wosilait,* 483
—, enzyme effect, *Wosilait and Sutherland,* 469
—, epinephrine relation, *Sutherland and Wosilait,* 459
Wosilait and Sutherland, 469
Rall, Sutherland, and Wosilait, 483
—, glucagon relation, *Sutherland and Wosilait,* 459
Wosilait and Sutherland, 469
Rall, Sutherland, and Wosilait, 483
—, preparation and properties, *Sutherland and Wosilait,* 459
Stearic acid turnover, *Tove, Andrews, and Lucas,* 275
Testosterone glucuronide formation, *Fishman and Sie,* 335

M

Maleate: Tobacco leaf culture, effect, *Vickery and Palmer,* 225
Malic dehydrogenase: Brain, determination, micro-, *Robins, Roberts, Eydt, Lowry, and Smith,* 897
Mannitol 1-phosphate dehydrogenase: D-, *Escherichia coli, Wolff and Kaplan,* 849
Mannose isomerase: *Pseudomonas saccharophila, Palleroni and Doudoroff,* 535
Methane: Tris(hydroxymethyl)amino-. *See* Tris(hydroxymethyl)aminomethane
Methylacetoacetyl coenzyme A: α-, isoleucine degradation, enzymatic, relation, *Robinson, Bachhawat, and Coon,* 391
Microbial inhibitor: Azathymine deoxyriboside, *Prusoff and Welch,* 929
Microorganism(s): Rumen, vitamin B_{12}-active substances, Co^{60}-containing, synthesis, *Johnson, Bentley, and Moxon,* 379
See also Bacillus, Bacteria, etc.
Mitochondrium: Enzyme system, tartaric acid oxidation, *Kun and Garcia Hernandez,* 201
Mucopolysaccharide(s): Metabolism, skin, acetate-C^{14}, relation, *Schiller, Mathews, Cifonelli, and Dorfman,* 139
—, —, glucose-C^{14}, relation, *Schiller, Mathews, Cifonelli, and Dorfman,* 139
—, —, sodium sulfate-S^{35}, relation, *Schiller, Mathews, Cifonelli, and Dorfman,* 139
Muscle: Amylo-1,6-glucosidase, glycogen storage disease, *Illingworth, Cori, and Cori,* 123
Myosin: Adenosinetriphosphatase activation, sulfhydryl groups, relation, *Kielley and Bradley,* 653

N

Nitric oxide reductase: *Chung and Najjar,* 627
Nitric reductase: *Chung and Najjar,* 617
Nitrogen: Isotopic, transamination reaction, use in study, *Tanenbaum,* 733

O

Obesity: Hyperglycemia, liver glycogen turnover, *Shull and Mayer,* 885
Oleate: Metabolism, fat deficiency effect, *Mead, Slaton, and Decker,* 401
Organ(s): Taurine, fasting effect, *Awapara,* 571
Organic acid(s): Tobacco leaves, metabolism, *Vickery and Palmer,* 225
Ornithinase: Acetyl-. *See* Acetylornithinase
Ornithine: Arginine biosynthesis from, kidney, *Walker,* 549
Oxidase: Carbohydrate. *See* Carbohydrate oxidase
Pyruvate. *See* Pyruvate oxidase
Pyruvic. *See* Pyruvic oxidase
Oxygen: *Hydrogenomonas* hydrogenase, effect, *Atkinson,* 557

P

Palmitic acid: Turnover, liver, *Tove, Andrews, and Lucas,* 275

Pentose: Cycle activity, kidney, intracellular distribution, *Newburgh and Cheldelin,* 89

— —, liver, intracellular distribution, *Newburgh and Cheldelin,* 89

Phenolic acid(s): Chromatography, paper, *Armstrong, Shaw, and Wall,* 293

Urine, *Armstrong, Shaw, and Wall,* 293

Phosphatase: Adenosinetri-. *See* Adenosinetriphosphatase

Glucose-6-. *See* Glucose-6-phosphatase

Phosphate: Guanosine di-. *See* Guanosine diphosphate

— tri-. *See* Guanosine triphosphate

Ribulose di-. *See* Ribulose diphosphate

Sedoheptulose di-. *See* Sedoheptulose diphosphate

Trimeta-. *See* Trimetaphosphate

Tripoly-. *See* Tripolyphosphate

Xylulose 5-. *See* Xylulose 5-phosphate

Phosphate buffer(s): Tris(hydroxymethyl)aminomethane and, ionization constants, *Bernhard,* 961

Phosphoglyceric acid: 3-, formation, carbon dioxide fixation and spinach leaf enzymes, *Jakoby, Brummond, and Ochoa,* 811

Formation, enzymatic, from ribulose diphosphate and carbon dioxide, *Weissbach, Horecker, and Hurwitz,* 795

Phospholipase: D, cabbage, *Tookey and Balls,* 213

—, cottonseed, *Tookey and Balls,* 213

—, plant, *Tookey and Balls,* 213

Phosphoribulokinase: Spinach, *Hurwitz, Weissbach, Horecker, and Smyrniotis,* 769

Phosphorylase: Liver, *Rall, Sutherland, and Wosilait,* 483

Phosphorylase—*continued:*

Liver, enzyme effect, *Wosilait and Sutherland,* 469

—, epinephrine relation, *Sutherland and Wosilait,* 459

Wosilait and Sutherland, 469

Rall, Sutherland, and Wosilait, 483

—, glucagon relation, *Sutherland and Wosilait,* 459

Wosilait and Sutherland, 469

Rall, Sutherland, and Wosilait, 483

—, preparation and properties, *Sutherland and Wosilait,* 459

Phosphorylation: Coupled, guanosine diphosphate relation, *Sanadi, Gibson, Ayengar, and Jacob,* 505

Phosphorylcholine: Acetylcholine synthesis, relation, *Berry and Stotz,* 871

Picolinic acid: Formation, 3-hydroxyanthranilic acid oxidation, enzymatic, relation, *Mehler,* 241

Pituitary: Growth hormone, amino acids, *Li and Chung,* 33

— —, chymotrypsin action, *Li, Papkoff, Fønss-Bech, and Condliffe,* 41

Plant: Ergothioneine, *Melville and Eich,* 647

Phospholipase D, *Tookey and Balls,* 213

Polygalacturonase: Yeast, *Phaff and Demain,* 875

Polysaccharide(s): Muco-. *See* Mucopolysaccharides

Protein: Flavo-. *See* Flavoprotein

Proteus: Pyruvate oxidase enzymes and coenzymes, *Moyed and O'Kane,* 831

Pseudomonas saccharophila: Mannose isomerase, *Palleroni and Doudoroff,* 535

Purine: Fermentation, *Clostridium cylindrosporum, Rabinowitz and Barker,* 147, 161

—, — —, 4-amino-5-imidazolecarboxylic acid and 4-aminoimidazole, relation, *Rabinowitz,* 175

—, — —, 4-ureido-5-imidazolecarboxylic acid, relation, *Rabinowitz and Pricer,* 189

Purine—*continued:*
Transformations, *Clostridium cylindrosporum, Rabinowitz and Barker,* 161
Pyridine: Hydroxysulfa-. *See* Hydroxysulfapyridine
Reduction products, excretion, *Fink,* 9
— —, intermediate, metabolism, *Fink, McGaughey, Cline, and Fink,* 1
Pyruvate oxidase: *Proteus,* enzymes and coenzymes, *Moyed and O'Kane,* 831
Pyruvic acid: Carbon 14-labeled, metabolism, algae, *Milhaud, Benson, and Calvin,* 599
Hydroxy-. *See* Hydroxypyruvic acid
Pyruvic oxidase: Acyloin condensation reactions, *Juni and Heym,* 365

Q

Quinolinic acid: Formation, 3-hydroxyanthranilic acid oxidation, enzymatic, relation, *Mehler,* 241

R

Reductase: Nitric. *See* Nitric reductase
Nitric oxide. *See* Nitric oxide reductase
Riboside: Azathymine deoxy-. *See* Azathymine deoxyriboside
Ribulose diphosphate: Phosphoglyceric acid formation from enzymatic, *Weissbach, Horecker, and Hurwitz,* 795
Ribulose 1,5-diphosphate: Synthesis, enzymatic, and properties, *Horecker, Hurwitz, and Weissbach,* 785
Rumen: Microorganisms, vitamin B_{12}-active substances, Co^{60}-containing, synthesis, *Johnson, Bentley, and Moxon,* 379

S

Sedoheptulose diphosphate: Preparation, *Smyrniotis and Horecker,* 745
Skin: Mucopolysaccharide metabolism, acetate-C^{14} relation, *Schiller, Mathews, Cifonelli, and Dorfman,* 139
Skin—*continued:*
Mucopolysaccharide metabolism, glucose-C^{14} relation, *Schiller, Mathews, Cifonelli, and Dorfman,* 139
— —, sodium sulfate-S^{35} relation, *Schiller, Mathews, Cifonelli, and Dorfman,* 139
Sodium sulfate: Sulfur 35-labeled, skin mucopolysaccharide metabolism, relation, *Schiller, Mathews, Cifonelli, and Dorfman,* 139
Spinach: Leaf enzymes, 3-phosphoglyceric acid formation, carbon dioxide fixation and, *Jakoby, Brummond, and Ochoa,* 811
Phosphoribulokinase, *Hurwitz, Weissbach, Horecker, and Smyrniotis,* 769
Stearate: Metabolism, fat deficiency effect, *Mead, Slaton, and Decker,* 401
Stearic acid: Turnover, liver, *Tove, Andrews, and Lucas,* 275
Steroid(s): 16-Substituted, *Huffman, Lott, and Tillotson,* 565
Strontium: Retention, bone, *Alexander, Nusbaum, and MacDonald,* 911
Succinic dehydrogenase: Adrenal, *Jardetzky and Glick,* 283
Determination, ultramicro-, *Jardetzky and Glick,* 283
Sulfate: Sodium. *See* Sodium sulfate
Sulfhydryl group(s): Myosin adenosinetriphosphatase activation, relation, *Kielley and Bradley,* 653

T

Tartaric acid: Oxidation, mitochondrial enzyme system, *Kun and Garcia Hernandez,* 201
Taurine: Organs, fasting effect, *Awapara,* 571
Testosterone: Estrogens from, castration and adrenalectomy effect, *West, Damast, Sarro, and Pearson,* 409
Testosterone glucuronide: Formation, liver, *Fishman and Sie,* 335
Thymine: 6-Aza-. *See* Azathymine

Tiglyl coenzyme A: Isoleucine degradation, enzymatic, relation, *Robinson, Bachhawat, and Coon,* 391
Tissue culture: Cell growth, L-glutamine and L-glutamic acid effect, *Eagle, Oyama, Levy, Horton, and Fleischman,* 607
Tobacco: Leaves, fumarate solutions, culture effect, *Vickery and Palmer,* 225
—, maleate solutions, culture effect, *Vickery and Palmer,* 225
—, organic acids, metabolism, *Vickery and Palmer,* 225
Transamination: Reaction, nitrogen, isotopic, use in study, *Tanenbaum,* 733
Trimetaphosphate: Yeast extracts, *Kornberg,* 23
Tripolyphosphate: Yeast extracts, *Kornberg,* 23
Tris(hydroxymethyl)aminomethane: Phosphate buffers and, ionization constants, *Bernhard,* 961
Trypsin: Chymo-. *See* Chymotrypsin

U

Ureido-5-imidazolecarboxylic acid: 4-, *Clostridium cylindrosporum* purine fermentation, relation, *Rabinowitz and Pricer,* 189
Uric acid: determination, micro-, *Dubbs, Davis, and Adams,* 497
Urine: Hydroxysulfapyridine, *Scudi and Childress,* 587
Phenolic acids, *Armstrong, Shaw, and Wall,* 293
Urobilin: *d*-, crystalline, *Watson and Lowry,* 633
Urobilinogen: *d*-, crystalline, isolation, *Lowry, Cardinal, Collins, and Watson,* 641

V

Vitamin: B_{12}-active substances, Co^{60}-containing, synthesis, rumen microorganisms, *Johnson, Bentley, and Moxon,* 379

X

Xylose: Metabolism, *Lactobacillus pentosus,* xylulose 5-phosphate rôle, *Stumpf and Horecker,* 753
Xylulose 5-phosphate: *Lactobacillus pentosus,* xylose metabolism, rôle, *Stumpf and Horecker,* 753

Y

Yeast: Guanosine di- and triphosphates, isolation, *Ayengar, Gibson, Peng, and Sanadi,* 521
Polygalacturonase, *Phaff and Demain,* 875
Tripolyphosphate and trimetaphosphate, *Kornberg,* 23
